The project includes class account. It has following functions:

- **void deposit(void)** - This function displays the deposit menu for depositing money.

- **void addrecord()** – This function adds the record of a customer to the database.

- **void delrecord()** – This function inputs an account number and closes that account by deleting the details from the database.

- **void modrecord()** - This function inputs a particular account number and modifies the details of that account.

- **void disprecord()** – This function inputs a particular account number and displays the details of that particular account.

- **void dispall()** – This function displays all the records present in the database.

- **void withdraw()** – This function displays the withdrawal menu for withdrawing money.

- **int giveaccountno()** – This function returns the account number.

- **void getdata(int mrno)** – This function inputs details of the customer.

- **void withdrawal(int m)** – This function displays the balance before after withdrawal.

- **void deposital(int m)** - This function displays the balance before after depositing money.

- **void dispdata()** – This function displays the details of a customer.
